## Basement Monitoring System

Smart sensors to alert you instantly when something is wrong

### Prevent flooding

The Basement Protection System monitors the water level in your basement and warns you if flooding occurs, so that you can act quickly.

### Receive storm warnings to your phone

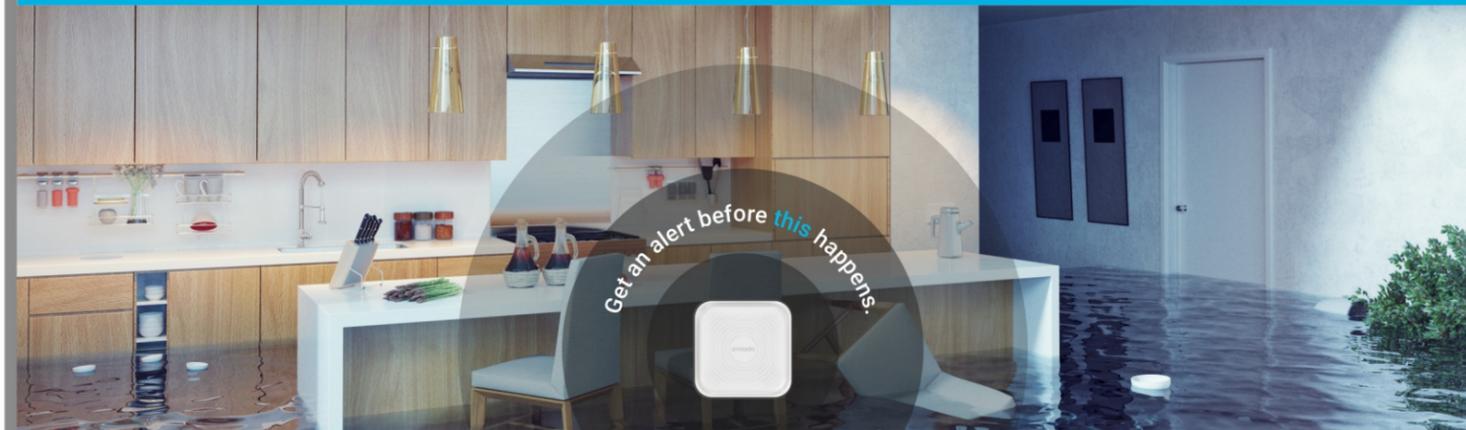

The app will send you weather alerts automatically and inform you if you need to prepare for it.

### Alerts for abnormal power output

The Basement Protection System will automatically learn the operating power of your flood pump to make sure that it's working properly. When abnormal behavior is detected, you will receive an alert on your app to remind you to check or repair the system.

### Pair with other smart devices and accessories

Pairing with other smart devices and accessories gives more possibilities for your smart home. When your Basement Protection System detects an irregularity, your cameras can automatically point to see what's happening. Pair it with a smart socket that can control the flood pump. Or pair it with a siren that will alert you if something bad happens.

## Smart Irrigation System

Control your watering, save on bills

### Water your lawn automatically and never worry about withered grass again

Set automated watering schedules from the app and control the dates, times, frequency, and duration of sprinkling for your lawn.

### Pair with smart sensors for smart interactions

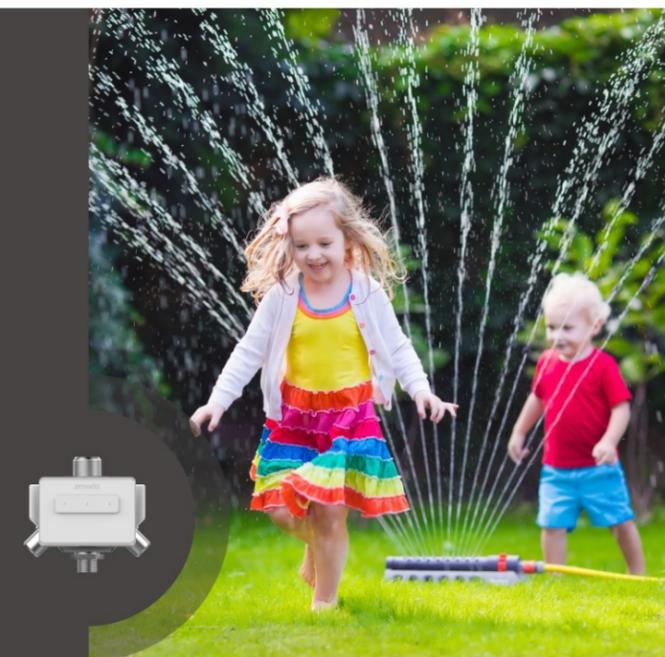

Pair with Zmodo smart accessories for more possibilities. For example, when the smoke detector is triggered, the Irrigation System will activate and prevent the fire from spreading.

### Receive local weather updates

Receive customized local weather updates to determine whether you need to water your lawn, or let nature do its job.

### Know your lawn on a deeper level

Pair your system with the moisture sensor to monitor your soil's moisture content and manage your lawn the right way.
